

**2/8/2011 EPA/Consolidated
Energy Company SPCC
Partnership Presentation
Hawkeye Community College,
Waterloo, Iowa**

In response to a telephone call from Consolidated Energy Company in Jessup, Iowa for assistance in answering the questions of local oil handlers, EPA completed a public presentation on February 8, 2011, covering the SPCC requirements. Consolidated Energy Company (CEC) is a distributor of oil and gas

products in northeastern Iowa. CEC distributes to oil handlers of all sizes a significant number of which have a total oil storage capacity less than 10,000 gallons.

CEC provided the location by reserving Tama Hall Auditorium at Hawkeye Community College in Waterloo, Iowa and published the event by mailing in excess of 900 invitations.

In excess of 90 owners/operators of SPCC facilities attended the presentation with a significant population of smaller oil handlers of less than 10,000 gallons storage capacity, primarily farmers. The presentation included a one and a half hour period of questions from the attendees and focused

on the requirements for farms and smaller oil handlers. Numerous attendees expressed their appreciation for EPA and CEC providing the presentation/assistance in understanding the SPCC requirements. A representative of the Iowa Farm Bureau also inquired on how to make this same opportunity available for farmers in his county/region.
